

Sprint 3 User Stories

Channel info messages

Whenever a user leaves or joins a channel, a message is displayed containing the name and time.

When the day of the server changes, a message is displayed.

These messages are “printed” in the list of messages where the chat messages are displayed.

Search users and channels

At the top of each drawer there’s a search field. When you type something it shows either users or channels, depending on which search field was used.

Query user

When a user listed in the right drawer is clicked, a Query is started. A Query works the same way as a channel in the left navigation drawer.

Invite user

Send a channel invite to a user.

Search backlog

Search backlog for occurrences of text or links.

Select what should be highlighted

Specify what the application should consider a highlight. CRUD view for input.

Chat scrolls down automatically

Chat scrolls down whenever new messages are received.

Bugfixes:

- Issue #1 - Application crashes when phone is tilted <https://github.com/ircSEX/ircSEX-Messenger/issues/1>
