

Sprint 2 User Stories

Send chat messages to the server (2 story points)

As a user, I want to be able to send chat messages to the server.

The user enters the message in a text field. The message can be sent either by pressing a send button, or pressing return on the soft keyboard.

See the messages in realtime (5 story points)

As a user, I want to be able to receive and see messages from the server.

The app shows sent messages and received messages in a chat bubble directly when it is received. The chat bubble is slightly tinted in a unique colour for the nickname. The chat bubbles will also show a timestamp indicating when a message was received.

List users in connected channels (3 story points)

As a user, I want to see the users connected to a certain channel.

A list of all the connected users in a channel is placed in the navigation drawer on the right hand side. The navigation drawer can be slid out from the right screen edge.

Who is (2 story points)

As a user, I want to be able to see whois information about a user.

Whois information can be accessed from the right drawer by clicking the info button next to a user. The information is displayed in a popup window.

Query users (1 story point)

As a user, I want to be able to query other users.

Users can be queried by pressing their names in the right drawer. A query acts the same way as a channel.
