Sprint 4 User stories

Search Backlog

It is possible to search a channel "conversation thread" for a string and filter the results.

Select Highlight

User can select for which strings a highlight notification is wanted.

Get notifications on Highlight

Whenever a message is received, and it contains the user's nickname (or some other arbitrary string), a notification will pop up in the action bar. Pressing the action bar item will switch to the channel where the message was received. The notification is then cleared.

Connect through SSH-tunnel

It is possible to tunnel sent and received data through the SSH protocol. It is possible to connect to a server without the host computer having an open port, for example irssi proxy.
