Sprint 4 User stories

Get notifications on action (5 story points)

Get notification on message received (2 story points)

As a user, I want to be notified when I have unread messages in channels.

When a message is received in an unread channel, a notification is shown in the action bar. Reading the message will clear the notification.

Get notification on highlight received (2 story points)

As a user, I want to be notified when I receive an unread message containing a highlight word.

When a message containing a highlight word is received in an unread channel, a notification is shown in the action bar. Reading the message will clear the notification. Highlights are considered more important than ordinary unread messages.

Go to unread message (1 story point)

As a user, I want to be able to click an unread message notification to go to the unread message.

Clicking the action bar item will take the user to the message that caused the notification.

Connect through SSH tunnel (13 story points)

As a user, I want to connect to a irc server through an SSH tunnel.

When the connect to server dialog is displayed, pressing the "Connect through ssh tunnel" checkbox will make three new fields appear. Entering relevant information in these fields will make the application connect to the specified server through an SSH tunnel.

Trackbar (1 story point)

As a user, I want to see which messages are unread in a channel.

A "trackbar" is inserted between the last read message and the first unread message in a channel.
